

SAFEBLAST

Whitepaper

TOKENOMICS

Token Name	SafeBLAST
Token Symbol	BLAST
Total/Max Supply (100%)	1,000,000,000,000,000 (1Q)

Decimals: 9

Total PreLaunch Burn (56%): 560,000,000,000,000 (560T)

Current Percentage (%) of Burned Tokens

PURPOSE

SafeBLAST is a utility and deflationary token that can be used to make direct payment on purchases where accepted worldwide. There's no need to sell or swap SafeBLAST (BLAST) tokens before making purchases. Also, every BNB Chain transaction reduces the circulating supply of the BLAST token, which makes it deflationary.

SafeBLAST (BLAST) tokens can also be traded on BLASTswap.com, Uniswap.org, PancakeSwap.finance and some centralized exchanges. BLAST tokens can also be purchased in Play-To-Earn (P2E) games, where BLAST token can be used for in-game activities.

BLAST tokens can also be used to purchase SafeBLAST NFTs and a variety of SafeBLAST merchandise.

Smart Contract Owner Address:

0x00

OVERVIEW

SafeBlast is an independent project that works by taking a 10% fee on every transaction on the BNB Chain. This is divided into two parts - REWARDS and LIQUIDITY. The REWARDS is a 5% transaction fee, which is auto-distributed to every wallet that holds BLAST on the BNB Chain based on percentage of holding. The more BLAST tokens a wallet holds, the more rewards it will receive. The "Dead" (Burn) wallet receives the most percentage to remove from circulation.

The second part is LP GENERATION, which is often referred to as Liquidity. This part get 5% transaction fee and deposited back into PancakeSwap liquidity pool, which is also LOCKED. These two functions work together to support the BLAST token ecosystem. The LP generation function allows the smart contract to automatically converts half of this 5% into BNB coin and pair with the other half in BLAST, to keep the LOCKED liquidity pool balanced.

SAFEBLAST (BLAST) PROTOCOL

SafeBlast uses three easy to understand functions: Redistribution, LP acquisition and Burn. PancakeSwap liquidity is forever locked for the safety and longevity of the product.

NOTE:

SafeBLAST (BLAST) token is founded on the BNB chain. NO additional BLAST tokens are created on any other blockchain. Token is moved from Chain to Chain via bridge only. The deflationary functions and transaction taxes, is only on the BNB chain.

SECURITY

SafeBLAST Smart Contract is Renounced, which means it cannot be manipulated. NO additional SafeBLAST (BLAST) tokens will ever be created or minted. Liquidity is locked and automatically locks after each transaction. A Renounced SafeBLAST contract also mean, NO individual or company benefits from or controls the pool. Safe and Secured.

SafeBLAST (BLAST) Token Launch on May 01, 2021

Smart Contract Ownership Renounce on May 01, 2021

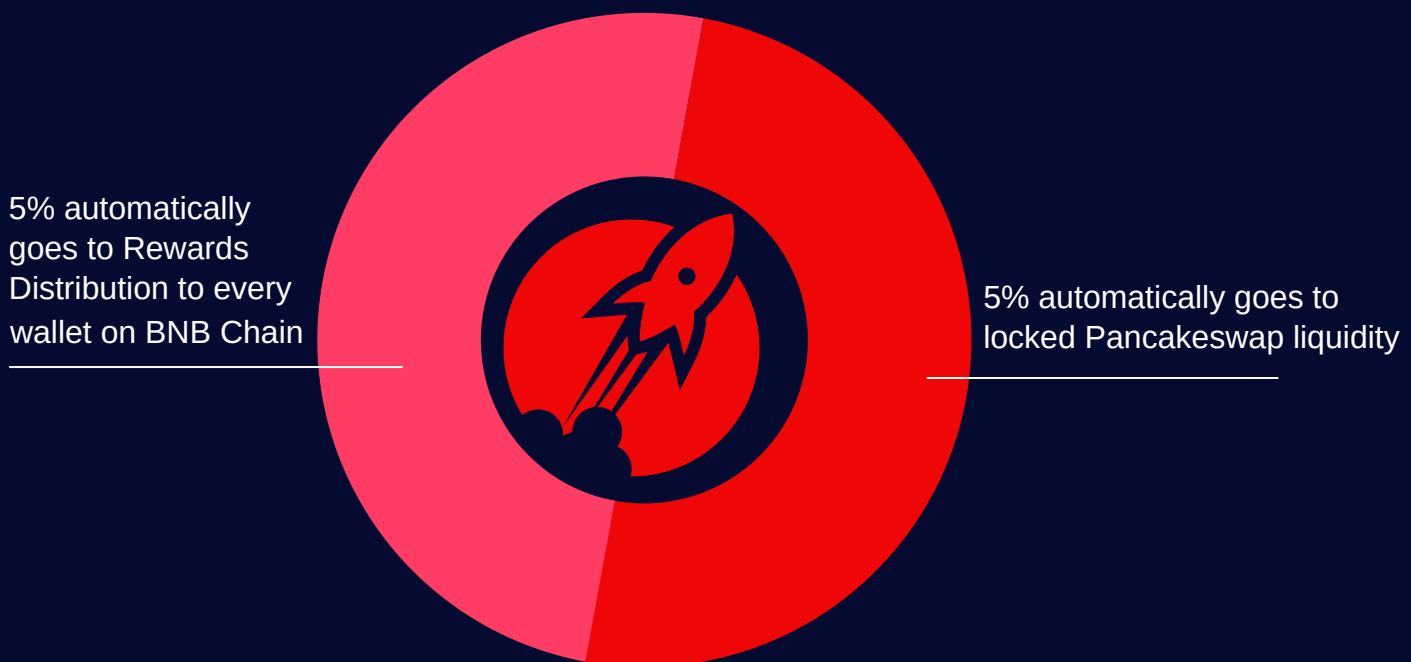

CIRCULATING SUPPLY

BLAST token is deflationary. ALL burned tokens are gone forever and out of circulation. The circulating supply will continue to go down. Check explorer for current supply total.

SLIPPAGE

- Suggested to set Slippage around 11% - 12% on PancakeSwap
- Suggested to set any slippage on Uniswap depending on network congestion

NOTE:

NO transaction tax on Centralized Exchanges (ZERO)

NO transaction tax on the ETH Chain including Uniswap

CIRCULATING SUPPLY

SafeBLAST's deflationary function automatically reduces the circulating supply daily. When token demand increases, it will also create a reduction in supply. View Blockchain for current circulating supply.

COMMUNITY

Safeblast is an independent smart contract. It has been created to be a decentralized and democratic project, where all volunteers are heard and in charge of decisions. There is no entity or company that controls the buying and selling activities.

The group of volunteers from all over the world, will help promote the project to reach more users and grow adoption.

MEDIA

SafeBLAST (BLAST) has been featured on many of the top media outlets including the following, but not limited to: Bloomberg, NASDAQ, Yahoo News, Market Watch, Benzinga, Yahoo Finance, Business Insider, CoinMarketCap Article and more.
